

# Journey into the future

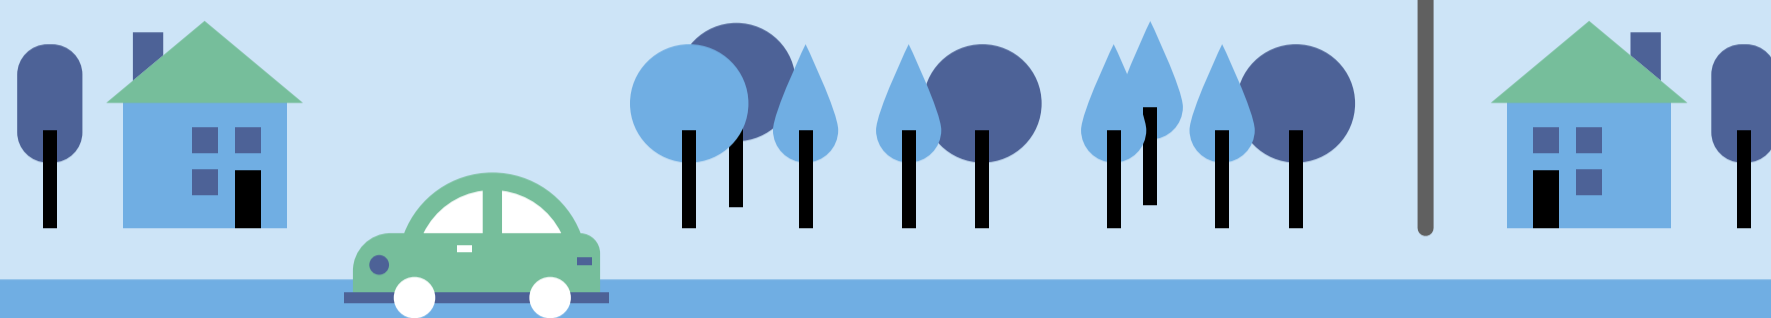

You know where you want your business to go, but do you know how to get there? Follow the path into the future to see how Windows Server 2019 can help you reach all the stops on your business roadmap.

## In the future, I want to...

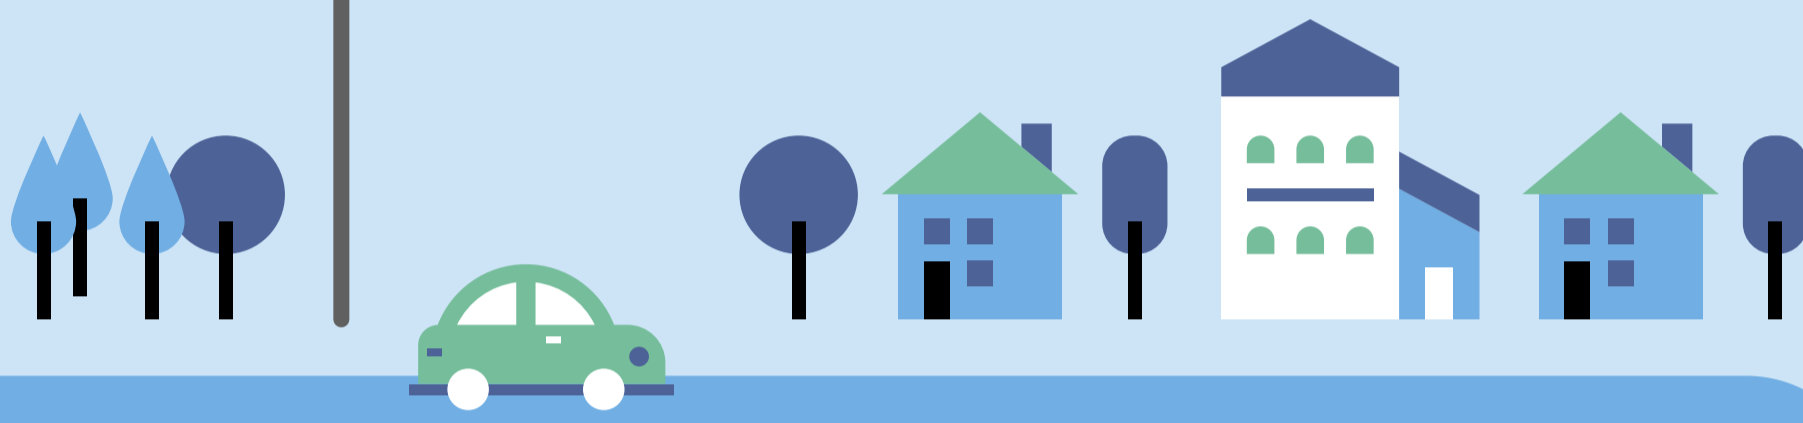

### Reduce up-front IT costs

Use virtualisation to run more apps and workloads on your existing server capacity. And take advantage of hybrid to launch new services at a lower cost.

### Perform better, all the time

Keep business-critical applications up and running, despite disruptions. Use enhanced failover clustering to spread risk across different physical locations.

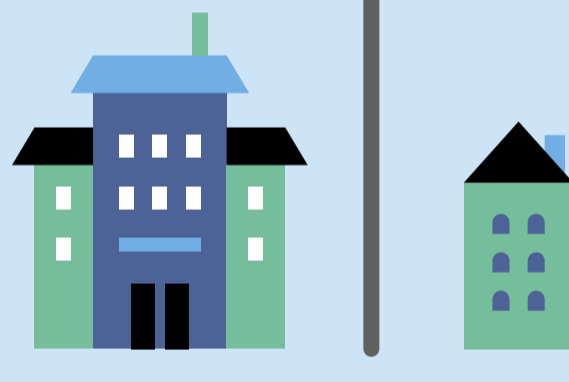

### Keep things flexible and scalable

Scale up and down quickly – and easily. All while maintaining your existing datacentre investments.

### Make management simple

Manage users, devices, and storage from one single dashboard. Seeing everything in one place allows you to progress with confidence.

### Stay ahead of security threats

Keep data safe from loss with automatic daily backup for every computer or network.

Plus, protect your apps and workloads with virtualisation and containerisation options.

### Innovate, innovate, innovate

Stay ahead with the help of knowledgeable developers.

And put your stamp on the thousands of applications that are already available (including advanced analytics).

### Refresh my server support

Upgrade to keep your apps, data, and workloads protected. Not quite ready for the end-of-support deadline? You can get up to three years' extra support with Extended Security Updates.

Where could Windows Server 2019 take you?

No matter where you see your business in the coming years, you can get there with Windows Server 2019.

**Find out how.**
