

## Solution Sheet

### Empowering the Frontline

PoliceBox is a next-generation mobile working platform designed specifically for front line police officers. A key component of PoliceBox is that it hides the complexities and differences between back-office systems so that officers can focus on doing their jobs. Officers see one simple but powerful user interface, whatever the back-office systems in use. They can carry out their work on their smartphone (or tablet or laptop/desktop) via easy-to-follow digital versions of the various processes they need to complete in the course of their daily activities.

### Born in the Cloud

For CIOs, PoliceBox is specifically designed for today's cloud-based architectures. Based on Microsoft technologies and hosted in Azure, it is fully aligned with today's National Policing IT programmes and is highly configurable. This means that forces can implement, amend and grow their mobile processes themselves, in record time and at lower cost, without relying on software updates from vendors. PoliceBox's flexible integration capabilities help IT departments address the all-too-often time-consuming complexities of connectivity to Police force systems.

### Software-as-a-Service

Finally, because PoliceBox is a configurable "Software-as-a-Service" platform, the underlying technology is the same for each and every customer – but ring-fenced and configured to local requirements. The approach means that PoliceBox improves the effectiveness of officers and staff in their interactions with the public.

The whole thing – a scalable cloud-based architecture with SaaS delivery - also means that PoliceBox is between a half and a third of the cost of current mobile solutions, helping tight budgets go further and bringing immediate cost savings.

### Highlights

- A modern platform solution, which aligns with NEP, Policing Vision 2025 and the National Policing Digital Strategy
- Supports interoperability, data standards and data quality initiatives
- Functionally rich, easy to use front line application - reducing training needs
- Agile deployment of front-line processes in days and weeks, instead of months (or years)
- Easily installed, based on Microsoft Azure infrastructure
- Simple SaaS based pricing, only paying for what you need with rapid ROI
- Flexible integration capabilities for interoperability and federated searching
- Supports Android, iOS, UWP, Chrome, Samsung Dex

POLICEBOX
